

Small Industrial Range: RB8-6-2

32A 415V 3 Phase Plug

The RB8-6-2 is designed for small to medium work sites; common at markets, commercial kitchens, and small to medium engineering and fabrication businesses. As site requirement change, the plug and play design allows the addition (daisy chaining) and/or removal of other temporary power boards, without the need for an electrician.

The ability to convert 3 phase power down to 240V single phase power, enables a full 15A to be drawn from each outlet at the same time. With individual RCBO protection, an earth fault in one outlet will not result in loss of power to the other outlets.

Manufactured from high impact and corrosion resistant polyethylene, these boards are designed for outdoor use, meeting IP66 standards (dustproof, jets of water) and come with a 5yr pro rata warranty.

Fitted as standard with an earth screened leads

KEY FEATURES

- Built in Australia by fully qualified electricians
- Windows are pad lockable
- Our entire board has been tested to IP66 not just the outlets
- Each outlet is protected by its own RCD/MCB combo so that if you have an earth leakage issue on one outlet you will not lose the whole board
- Option to upgrade breakers to 10kA
- Cascade outlet – for daisy chaining additional boards
- Plug and go design – no hardwiring required
- 5 year pro rata warranty
- Boards are made from UV resistant high impact polyethylene
- Can be customised to specific site requirements

SPECIFICATIONS

Supply Inlet:	1.8m earth screened lead with 32A 415V 5 pin plug IP66
Cascade Outlets:	1 x 32A 415V 5 pin switched IP66
Outlets:	6 x 15A 240V 3 pin auto switched IP66
MCB RCBO:	1 x 32A 3 pole Main MCB 6kA 6 x 16A 2 pole RCD/MCB combo 6kA 30mA
IP Rating:	IP66
Materials:	UV resistant high impact polyethylene
Dimensions:	9.8kg – 63cm (L) x 30cm (W) x 18cm (H)

Specifications subject to change without notice, Version: January 2019.
