

Board Stand: ST01

The ST01 is designed to fit the entire large industrial range of power boards. The ability to elevate the boards off the ground, allows easier access for personnel and reduces the environmental impact on the board. The stand is also easily stacked to reduce transport and storage costs.

Manufactured from high impact and corrosion resistant polyethylene, these stands are designed for outdoor use.

The board stand can be fitted with an inlet and multiple outlets based on individual requirements. This creates a main power distribution center on site, capable of powering multiple large industrial boards.

SPECIFICATIONS

Materials:	UV resistant high impact polyethylene
Dimensions:	15kg – 60cm (L) x 60cm (W) x 66cm (H)

KEY FEATURES

- Corner anchor points for fixing to ground
- Fits the entire large industrial range of power boards (LB01, LB02, LB03, MB01, MB02, SB01)
- Stackable design for easy storage and transport
- Boards are made from UV resistant high impact polyethylene
- Designated area on each corner for mounting extension lead stands

Optional main power distribution center
